

YOUR BODY, YOUR CHOICE

There are two ways of ending a pregnancy: in-clinic abortion and the abortion pill. **Both are safe and very common.**

The “abortion pill” is the common name for using two different medicines to end a pregnancy: mifepristone and misoprostol. You can also use misoprostol alone to have an abortion. The abortion pill works up to 11 weeks of pregnancy. You can usually have your abortion in the privacy of your own home. Finding and taking abortion pills to end a pregnancy without the help of a doctor or nurse is called “self-managed abortion”. Learn more at: <https://www.plancpills.org>

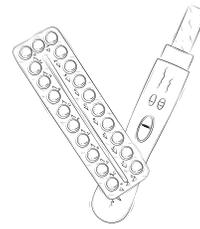

In general, you can have a medication abortion up to 77 days (11 weeks) after the first day of your last period. If it’s been 78 days or more since the first day of your last period, you can have an in-clinic abortion to end your pregnancy. Learn more at: <https://www.plannedparenthood.org>
